WS1: Social Performance Autopsy

Content Performance, Funnel conversion & Strategic Recommendations | POD C (Team BrainBox)

Executive Summary

Core Discovery

Deep impression does not equal commercial conversion; structure and timing drive audience intent.

Strategic Action

50% carousel allocation drives growth.

Data Scope & Methodology

103 Audited Posts

Complete cleanup of raw posts (‘02_Clean_Posts’), resolving historical content pillar debt into defined tracking buckets.

81 Daily Tracking Days

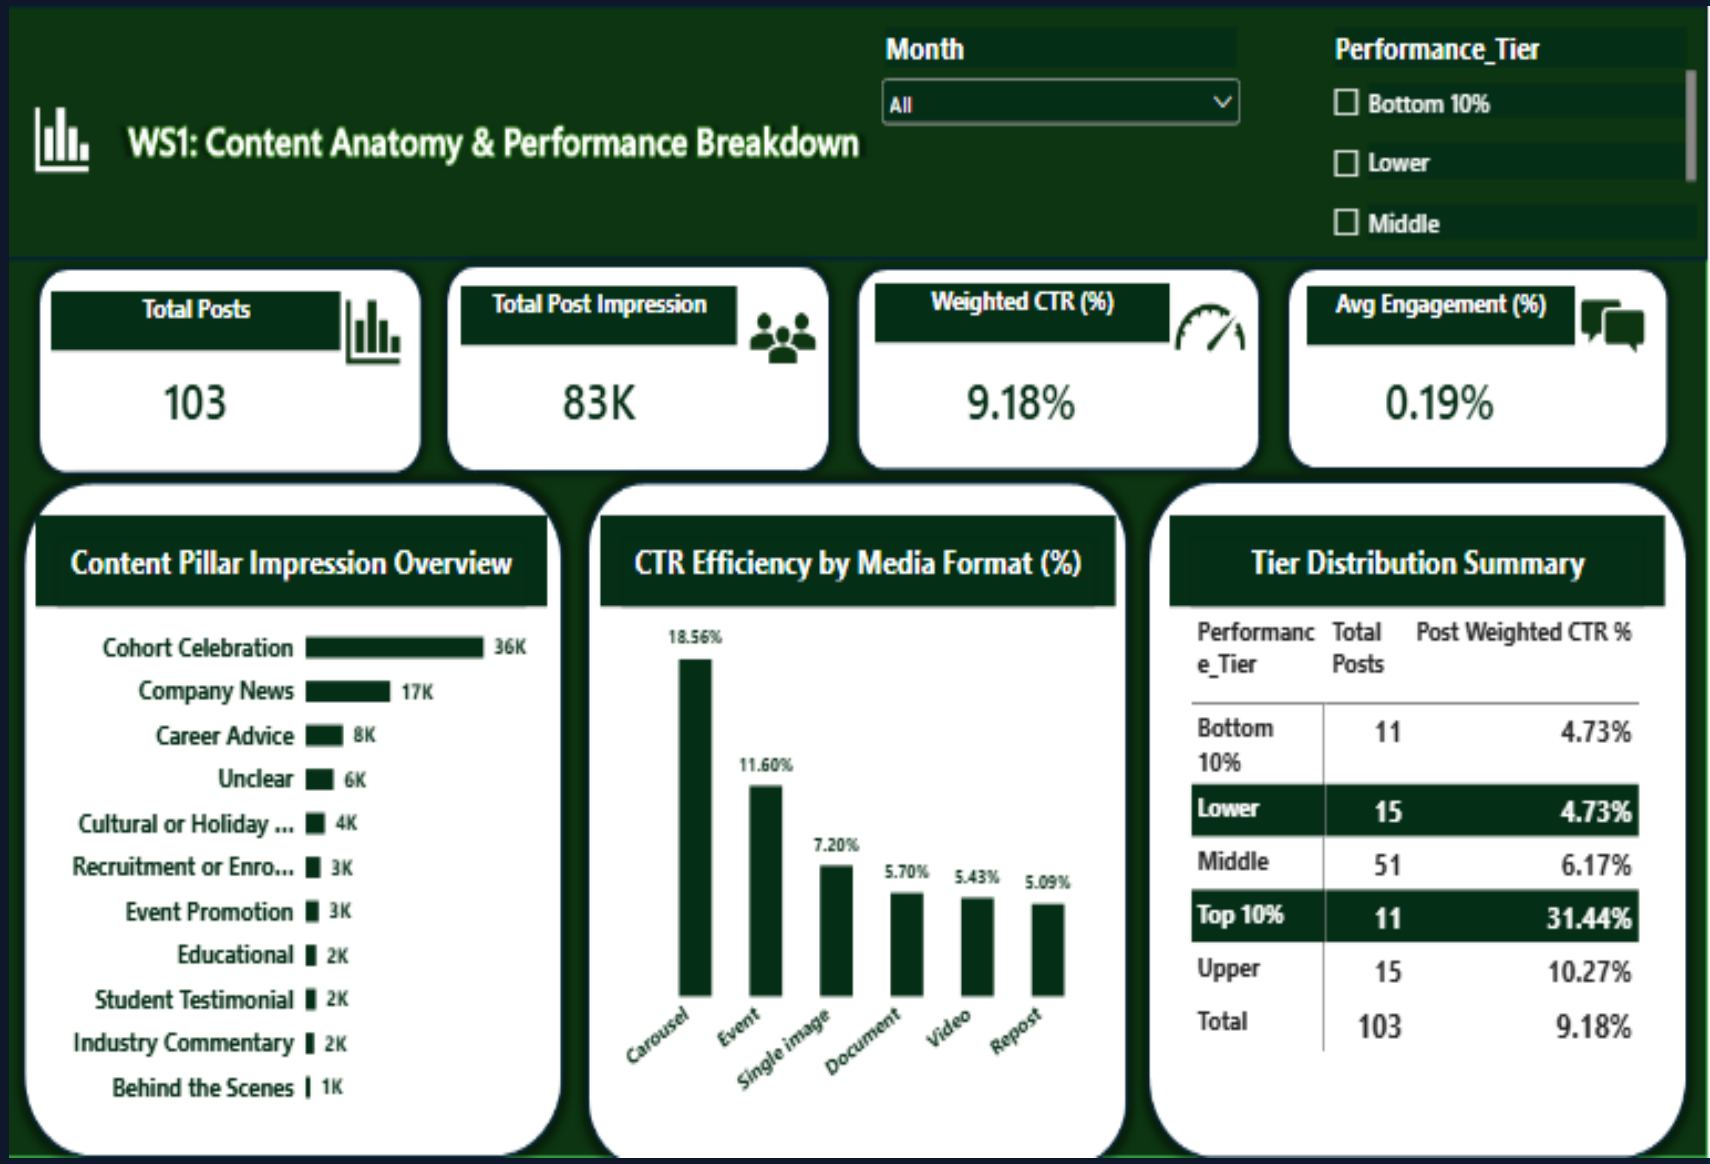

Macro platform metrics spanning September 1 through December 31, 2025, powered by a star-scheme ‘Dim_Date’ time table.

$0 Paid Media Baseline

100% organic reach baseline across all daily logs, ensuring all engagement gains are strictly organic.

AFRIMENT

- **The Top 10% Dominance**: **The Top 10% tier (11 posts)** commands an astonishing **31.44% Weighted CTR**, outperforming all other tiers by a massive margin and proving that high-performing assets disproportionately drive user click-through intent.
- **Media Format Efficiency: Carousel** formats lead the board by a landslide at **18.56% CTR efficiency**, followed by Event formats **(11.60%),** proving that multi-page structured visual documents capture and hold user attention far better than static images or standard video posts.
- **Content Pillar Volume vs. Yield: Cohort Celebration** and **Company news** lead raw impression volume (capturing 36K and 17K impressions respectively), while specialized professional content drives high-value depth.
- **Baseline Volume:** Across the entire scope of **103posts** and **83K total post** impressions, the overall portfolio maintains a stable weighted baseline **CTR** of **9.18%** with an average engagement rate of **0.19%**.

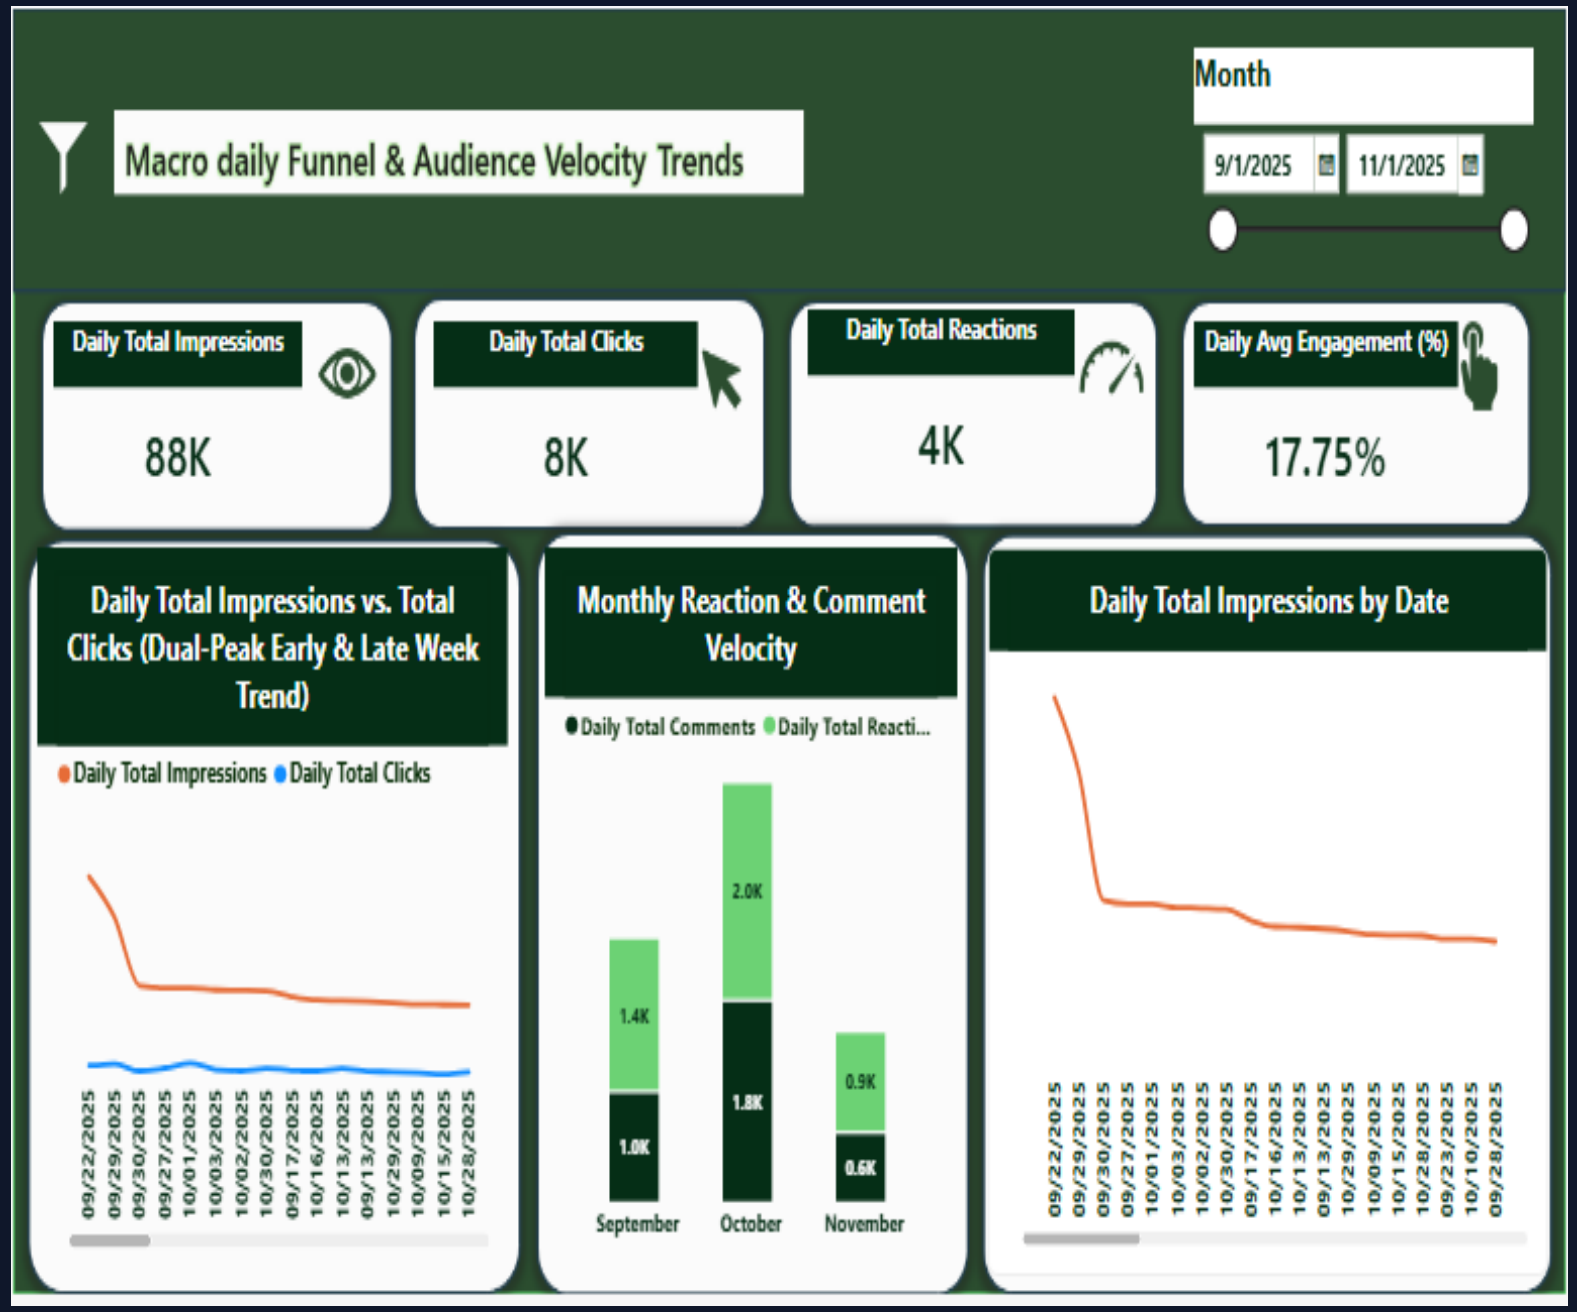

- **Macro Funnel Scale:** Across the analyzed window, the portfolio generated **88K Total Impressions,** converting into **8K Total Clicks** and **4K Total Reactions** with an average engagement baseline of **17.75%.**

- **Traffic Wave Dynamics (Dual-Peak Trend):** The daily impressions vs. click trend highlights an unmistakable **early-week and late-week volume surge**, capturing heavy audience attention peaks at the start of the week and heading into Friday lulls/spikes, while mid-week traffic normalizes.

- **Monthly Velocity Progression:** The monthly reaction and comment velocity chart demonstrates a strong compounding interaction climb through **September and October**, showing that community engagement accelerates as active publishing consistency matures.

- **Daily Timeline Distribution:** The chronological date trend confirms steady, predictable baseline engagement across the 81 active tracking days without erratic anomalies, validating the reliability of the structured date hierarchy.

Outlier Teardown Comparison

Performance Dimension	Top Outliers (Viral / High CTR)	Bottom Outliers (Low CTR / Underperformers)	Teardown Variance & Key Driver
Media Format	Multi-Page Document Carousel (18.56% CTR)	Single Static Image / Long Text (4.73% CTR)	+13.83% CTR Gain via swipe interactivity
Hook Architecture	Direct 2-line outcome framework above fold	5+ line narrative story before key value pitch	Immediate clarity captures high-intent readers
Call-to-Action (CTA)	Explicit directional prompt + direct hyperlink	Passive concluding statement with no link	Clear directional CTAs boost click-through rate
Audience Tagging	100% tagged with Pillar & Pod Taxonomy	Unclassified / Missing metadata identifiers	Structured tagging allows automated optimization
Velocity & Timing	Published during Mon AM / Fri PM peak windows	Off-peak mid-week lull publishing windows	Riding natural traffic waves multiplies reach

AFRIMENT

Rung 4 Strategic Recommendations

1. Enforce 50% Carousel Allocation

Shift core publishing pipeline toward multi-page document carousels across all educational and celebratory pillars to secure the benchmark 18.56% CTR standard.

2. Enforce 2-Line Hook Governance

Restrict captions to a strict 2-line outcome-driven headline above the "See More" fold to drive maximum immediate conversion toward the 31.44% Top Tier target.

3. Align Publishing to Peak Waves

Schedule high-intent conversion posts specifically during Monday morning surges and Friday afternoon peak activity windows uncovered in daily funnel telemetry.

4. Mandate Pod Taxonomy Tagging

Institute mandatory pre-publishing tagging across all pods to eliminate unclassified data debt and enable 100% automated performance analytics ingestion.

AFRIMENT

$0 Organic Baseline Constraints

Zero Paid Distribution ($0 Budget)

100% organic growth execution without ad boosting. Proves that format structural optimization alone drives viral audience resonance without paid acquisition costs.

Creative Bottleneck Realities

In-house asset creation capacity limits high-frequency video production. Requires strict reliance on repeatable, high-yield multi-slide document templates.

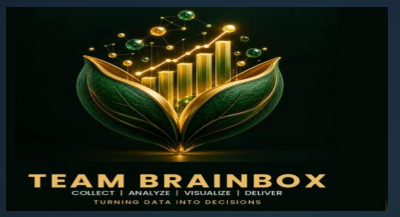

Platform Feed Dependencies

Organic reach relies on platform feed algorithms. Demands high early-engagement velocity within the first 60 minutes to sustain organic feed promotion.

Telemetry & Data Attribution

Without paid tracking pixels, conversion tracking depends entirely on standardized organic UTM parameters and clean manual tagging governance.

Cross-Pod Asks (Pods A & B)

Pod A: Content & Creative Pod

1. Carousel Template Delivery: Standardize 5-slide visual carousel templates equipped with 2-line hook layouts.

2. Asset Delivery Lead Time: Hand off approved creative assets 48 hours prior to publishing to allow proper metadata tagging.

3. Visual Alignment: Standardize high-contrast branding elements across all educational graphics.

Pod B: Growth & Telemetry Pod

1. Telemetry Dashboarding: Maintain real-time CTR and reaction velocity tracking across all newly deployed formats.

2. UTM Parameter Enforcement: Audit all external links to ensure 100% compliance with campaign attribution tags.

3. Bi-Weekly Cadence Reviews: Co-conduct telemetry reviews to refine publishing wave schedules dynamically.
